WA State K-12 Science Learning Standards - 2013

LIFE SCIENCE (NGSS) From Molecules to Organisms: Structures and Processes Students who demonstrate understanding can: Conduct an investigation to provide evidence that living things are made of cells; either one cell or many different numbers and types of cells. Develop and use a model to describe the function of a cell as a whole and ways parts of cells contribute to the function.	Characteristics of Life Cell Theory Lab: Exploring Cells Bacteria Protists Fungi
Students who demonstrate understanding can: Conduct an investigation to provide evidence that living things are made of cells; either one cell or many different numbers and types of cells. Develop and use a model to describe the function of a cell as a whole and ways parts of cells	Characteristics of Life Cell Theory Lab: Exploring Cells Bacteria Protists

	Cell Theory Lab: Exploring Cells Bacteria Protists
	Lab: Exploring Cells Bacteria Protists
	Bacteria Protists
	Protists
	Fungi
contribute to the function.	
	Cell Structure
	Animal and Plant Cells
	Lab: Exploring Cells
	Cellular Interactions with the Environment
	Photosynthesis
	Cellular Respiration
	Cell Cycle
	Meiosis
	Genetic Code
	Lab: Building Proteins from RNA
Use argument supported by evidence for how the body is a system of interacting subsystems composed of groups of cells.	
	Body Organization and Homeostasis
	The Musculoskeletal and Integumentary Systems
	The Nervous and Endocrine Systems
	The Circulatory and Respiratory Systems
	The Digestive and Excretory Systems
	The Reproductive System
	The Immune System

Standard ID	Standard Text	Edgenuity Lesson Name
MS-LS1-4.	Use argument based on empirical evidence and scientific reasoning to support an explanation	
	for how characteristic animal behaviors and specialized plant structures affect the probability	of
	successful reproduction of animals and plants respectively.	
		Overview of Plants
		Seed Plants
		Seedless Plants
		Gymnosperms
		Angiosperms
		Lab: Flower Dissection
		Plant Responses
		Overview of Animals
		Animal Behavior
		Lab: Earthworm Behavior
MS-LS1-5.	Construct a scientific explanation based on evidence for how environmental and genetic facto influence the growth of organisms.	ors
		Genetic Code
		DNA Mutations
		Introduction to Heredity
		Predicting Heredity
		Lab: Heredity and Punnett Squares
		Inheritance Patterns
		Human Inheritance
		Natural Selection
		Lab: Natural Selection
		Populations
MS-LS1-6.	Construct a scientific explanation based on evidence for the role of photosynthesis in the cycli of matter and flow of energy into and out of organisms.	ing
		Photosynthesis
		Cycles of Matter
		Energy Flow in Ecosystems

Standard ID	Standard Text	Edgenuity Lesson Name
MS-LS1-7.	Develop a model to describe how food is rearranged through chemical reactions forming new	
	molecules that support growth and/or release energy as this matter moves through an	
	organism.	
		Building Blocks of Life
		Catalysts
		Lab: Identifying Nutrients
		The Digestive and Excretory Systems
MS-LS1-8.	Gather and synthesize information that sensory receptors respond to stimuli by sending	
	messages to the brain for immediate behavior or storage as memories.	
		The Nervous and Endocrine Systems
MS-LS2.	Ecosystems: Interactions, Energy, and Dynamics	
	Students who demonstrate understanding can:	
MS-LS2-1.	Analyze and interpret data to provide evidence for the effects of resource availability on	
	organisms and populations of organisms in an ecosystem.	
		Living Things and the Environment
		Biodiversity
		Populations
		Cycles of Matter
		Energy Flow in Ecosystems
MS-LS2-2.	Construct an explanation that predicts patterns of interactions among organisms across multip	le
	ecosystems.	
		Interactions among Living Things
		Lab: Owl Pellets
		Lab: Interdependence of Organisms
		Energy Flow in Ecosystems
		Biomes
MS-LS2-3.	Develop a model to describe the cycling of matter and flow of energy among living and nonlivir	ng
	parts of an ecosystem.	
		Cycles of Matter
		Energy Flow in Ecosystems
MS-LS2-4.	Construct an argument supported by empirical evidence that changes to physical or biological	
	components of an ecosystem affect populations.	
		Succession
		Lab: Ecological Succession
		Natural Environmental Change
		Human Impact on the Environment

Standard ID	Standard Text	Edgenuity Lesson Name
MS-LS2-5.	Evaluate competing design solutions for maintaining biodiversity and ecosystem services.	•
		Biodiversity
MS-LS3.	Heredity: Inheritance and Variation of Traits	
	Students who demonstrate understanding can:	
MS-LS3-1.	Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.	2
		DNA Mutations
MS-LS3-2.	Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.	Cell Cycle Meiosis
		Asexual and Sexual Reproduction Introduction to Heredity Predicting Heredity
		Lab: Heredity and Punnett Squares Inheritance Patterns
MS-LS4.	Biological Evolution: Unity and Diversity	
	Students who demonstrate understanding can:	
MS-LS4-1.	Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth under the assumption that natural laws operate today as in the past.	
		The Theory of Evolution
		The Fossil Record
		Evidence for Evolution
MS-LS4-2.	Apply scientific ideas to construct an explanation for the anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer evolutionary relationships.	
		Evolutionary Relationships
		Introduction to Classification
		Classification of Living Things
		Dichotomous Keys Lab: Dichotomous Keys

WA State K-12 Science Learning Standards - 2013

Standard ID	Standard Text	Edgenuity Lesson Name
MS-LS4-3.	Analyze displays of pictorial data to compare patterns of similarities in the embryological	
	development across multiple species to identify relationships not evident in the fully formed	
	anatomy.	
		Evidence for Evolution
MS-LS4-4.	Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.	
		Natural Selection
MS-LS4-5.	Gather and synthesize information about the technologies that have changed the way humans influence the inheritance of desired traits in organisms.	
		Advances in Genetics
MS-LS4-6.	Use mathematical representations to support explanations of how natural selection may lead to increases and decreases of specific traits in populations over time.)
		Lab: Natural Selection
